

E- waste recycling in china

Submitted by- Deeksha Rani

E-waste

- E-waste, or electronic waste, refers to discarded electronic devices like computers, phones, TVs, and other electronic equipment that are no longer needed or have reached the end of their useful life.
- Examples of E-waste:- Computers and laptops
- Mobile phones and tablets
- TVs and monitors
- Refrigerators and air conditioners-
- Batteries and cables
- Printers and scanner

■ E-waste process

- The e-waste recycling process involves several stages
- 1.Collection: E-waste is collected from households, businesses, and institutions
- 2.Dismantling: Devices are dismantled to recover valuable components
- 3.Processing: Materials are processed to extract metals, plastics, and other recyclables.
- 4. Refurbishment: Functional devices are refurbished for reuse.

China's E-waste recycling initiatives

- China's E-waste Recycling Initiatives:-
- Goal: Recycle 50% of e-waste by 2025-
- Circular Economy Projects: Boost recycled materials in production (20% target)
- Regulatory Frameworks: subsidies for recycling facilities, stricter regulations-
- Innovative Technologies: Automated sorting, extraction methods-
- Challenges:
 - Informal sector, e-waste import ban, lack of awareness- *Growth:* 13.43% CAGR (2025-2035)
