Concept of Digital Public Infrastructure

- Digital Public Infrastructure (DPI) refers to foundational digital systems developed as public goods.
- It supports digital governance, service delivery, and economic activities.
- DPI enables paperless, cashless, and presence-less interactions.

Vision

Vision of Digital India

The vision of Digital India encompasses a technologically empowered nation where access to digital services is universal, bridging the urban-rural divide. It aims to foster innovation, economic growth, and inclusive development through digital empowerment across sectors.

Infrastructure Development

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor.

Digital Empowerment

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor.

Innovation and Entrepreneurship

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor.

Digital Economy

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor.

Core Components of India's DPI

1. Digital Identity – Aadhaar

- Biometric-based unique digital identity system.
- Covers nearly the entire population.
- Enables authentication for welfare, banking, and public services.

2. Digital Payments – Unified Payments Interface (UPI)

- Real-time and interoperable digital payment platform.
- Connects banks, users, and merchants through mobile devices.

3. Digital Platforms

- DigiLocker, Account Aggregator, and ONDC support secure data sharing and service access.

9 Pillars of Digital India

Broadband Highways

Focuses on expanding broadband infrastructure across India.

Public Internet Access

Establishes public internet access points for citizens.

e-Kranti

Focuses on electronic delivery of services.

Electronics Manufacturing

Promoting electronics manufacturing within the country.

Early Harvest Programmes

Implementing quick-impact digital initiatives.

Mobile Connectivity

Aims to provide universal access to mobile networks.

e-Governance

Reforming government processes through technology adoption.

Information for All

Ensuring access to information for all citizens.

IT for Jobs

Creating job opportunities in the IT sector.

India Stack (Present Context)

Aadhaar:

- Over 1.4 billion digital identities issued.

UPI (2025):

- Handles around 85% of India's digital payment transactions.
- Processes over 640 million transactions daily.
- Used by 49+ crore users and 6.5+ crore merchants.

RBI Digital Payments Index:

- Increased to 493.22 (March 2025), indicating rapid digital adoption.

Impact of Digital Public Infrastructure

Governance Impact

- Improved efficiency and transparency in public service delivery.
- Strengthened Direct Benefit Transfer (DBT) system.
- Reduced corruption and leakage in welfare schemes.

Economic and Social Impact

- Enhanced financial inclusion across rural and urban areas.
- Growth of digital economy, fintech, and MSMEs.
- Improved access to essential services for citizens.

Global Recognition of India's DPI

- India's DPI is recognized as a global model for inclusive digital transformation.
- UPI has expanded to several countries including Nepal, Singapore, UAE, and France.
- India supports other nations in developing Digital Public Goods (DPGs).
- DPI strengthens India's role in global digital cooperation.

Challenges and Future Outlook

Key Challenges

- Digital divide and unequal internet access.
- Data privacy and cybersecurity concerns.
- Need for stronger regulatory and institutional frameworks.

Future Prospects

- Expansion of offline digital payment solutions.
- Integration of advanced technologies such as AI.
- Continued global adoption of India's DPI framework.

Conclusion

- India's Digital Public Infrastructure serves as the backbone of digital governance, promoting inclusive growth, transparency, and innovation.

India's Digital Public Infrastructure is a Blueprint for Global Success

3 LAYERS OF INDIA'S DPIS

-  Data Layer - Enabling consented, secure sharing of data - *Users decide how to use their data*
-  Payments Layer - Allowing anyone to pay anyone else - *Interoperable, fast and cheap*
-  Identity Layer - Giving every resident a unique ID

GUIDING PRINCIPLES

 Open Source

 Interoperability

 Trust and Consent

Thank you
