

X-ROAD ESTONIA

PRESENTED BY,
ANJALI CHAUDHARY

INTRODUCTION

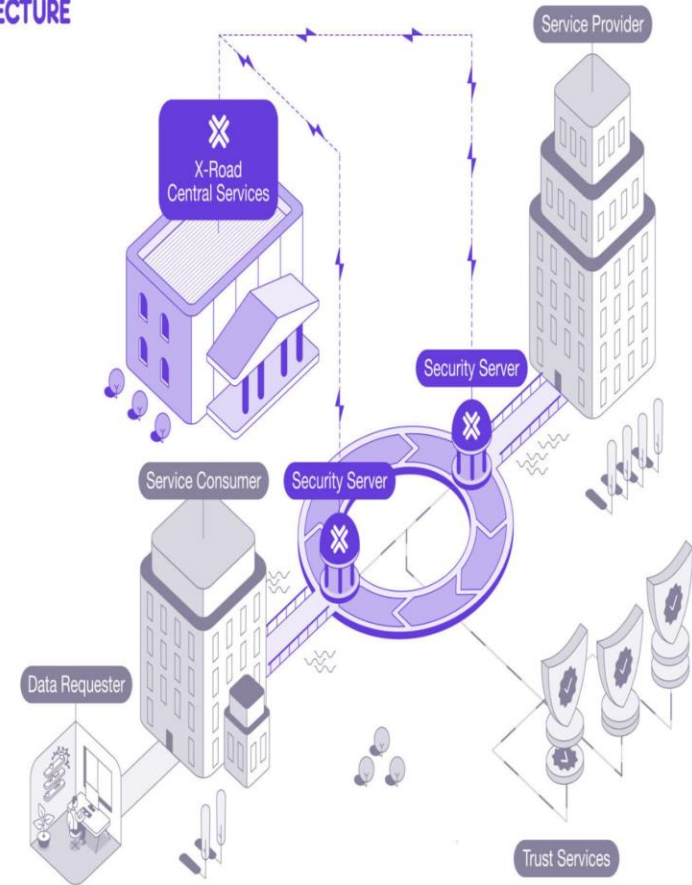

- X-Road is a secure digital data exchange platform developed by Estonia.
- It connects different government and private sector databases.
- Launched in 2001 as the backbone of Estonia's e-Government system.
- Known in Estonia as 'X-tee' (Digital Highway).

HOW X-ROAD WORKS

- Not a central database - each institution keeps its own data.
- X-Road enables safe data sharing between systems.
- All data transfers are encrypted and digitally signed.
- Every access is logged to ensure transparency and accountability.

X-ROAD ARCHITECTURE

BENEFITS OF X-ROAD

- High security: encryption, authentication, and audit trails.
- Interoperability between different institutions.
- Saves time and cost - citizens give information only once.
- Supports services like e-health, e-tax, e-police, and e-business.
- Promotes trust and transparency.
- Faster and efficient public service delivery.

IMPORTANCE FOR ESTONIA

- Foundation of Estonia's digital governance success.
- Over 99% of public services are available online.
- Enables fast, transparent, and corruption-free services.
- Trusted system used by millions of citizens daily.

RELEVANCE TO NEPAL

- Nepal is moving towards Digital Governance and e-Government.
- X-Road can inspire secure data sharing between ministries.
- Useful for systems like National ID, Tax, Health, and Citizenship.
- Adopting similar models can improve service delivery in Nepal.

The image features a soft, pink watercolor wash in the center of a white background. The wash has a textured, painterly appearance with various shades of pink and some darker, more saturated areas. Overlaid on this wash is the text "Thank You" in a black, elegant cursive script. The word "Thank" is on the top line, and "You" is on the bottom line, slightly to the right. The overall composition is simple and heartfelt.

Thank
You
